Jeevashraddha C - CSE department
Vijayalakshmi R - ECE department
Dia Ansar P P - ECE department
Shraddha Desai - ECE department

Our Theme:

Good Health and Well Being

Introduction

Problem Statement

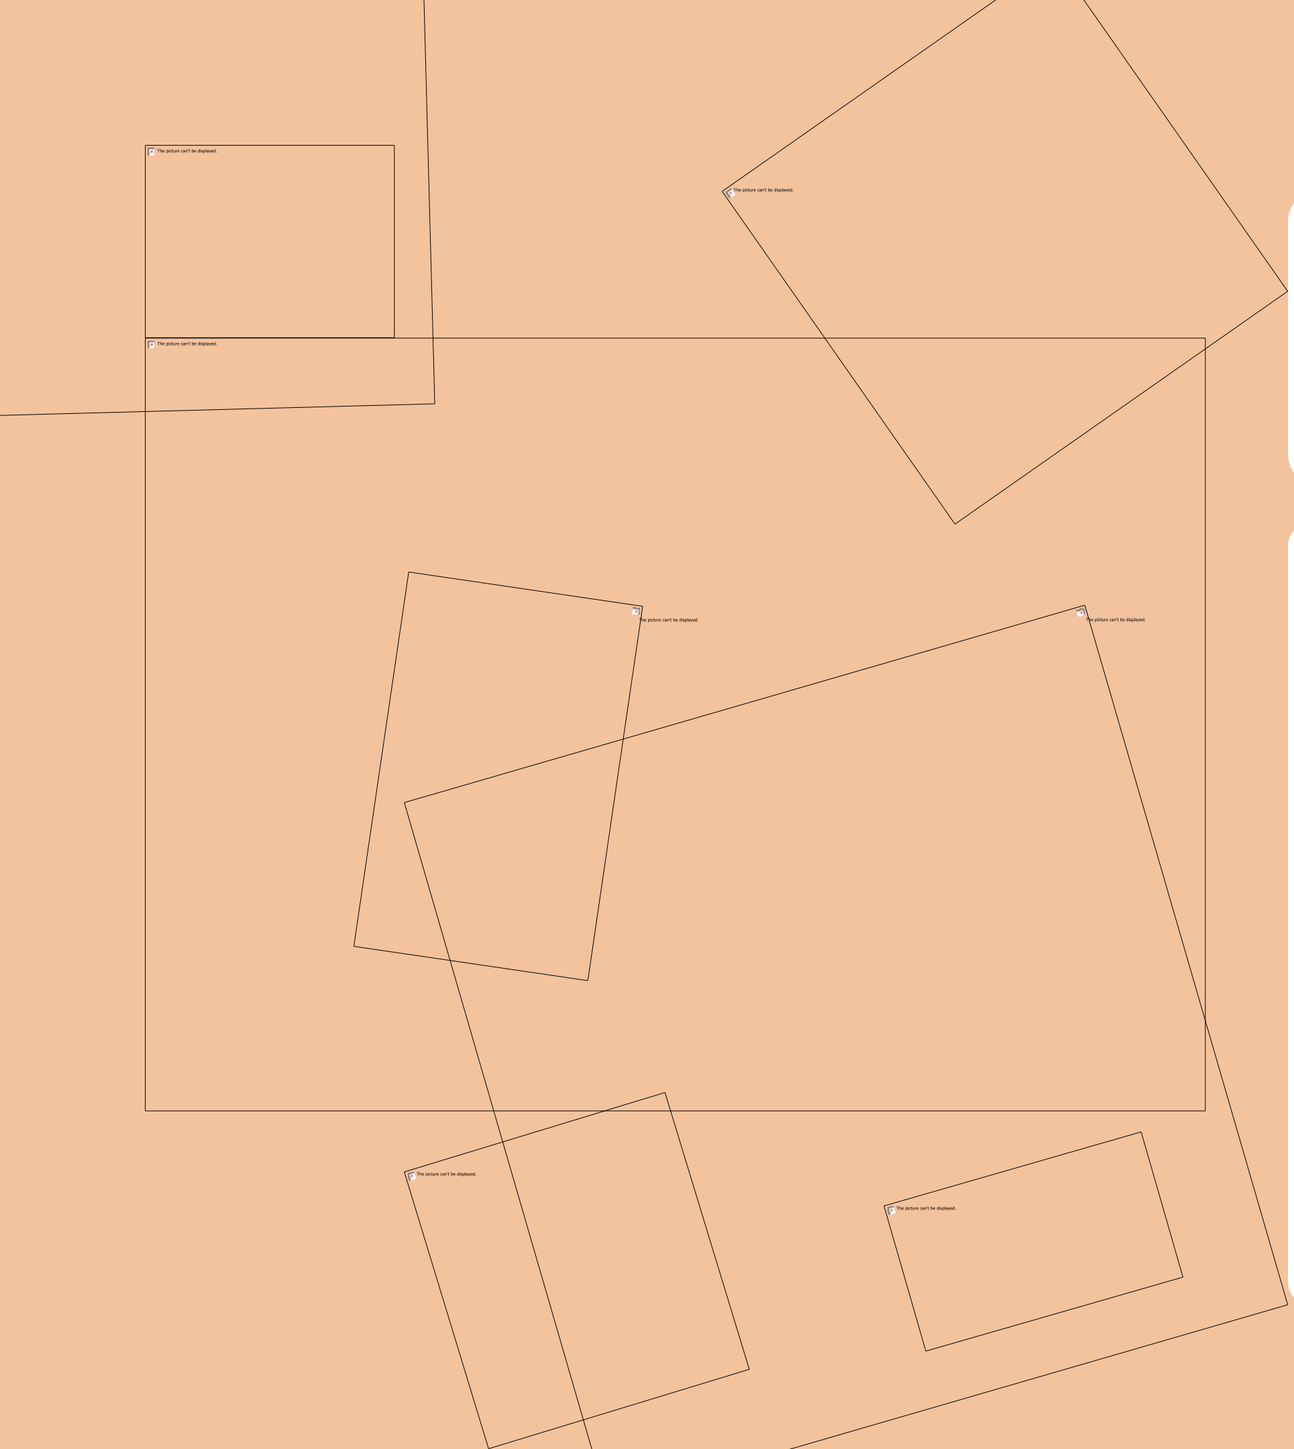

- Navigating healthcare management in India is overwhelming and disconnected.
- Patients struggle to manage physical documents, track recurring prescriptions, and schedule timely appointments
- Emergency situations suffer from a lack of immediate, critical medical data and rapid SOS dispatch.
- Furthermore, existing digital health tools are largely single-language, excluding millions of non-English speakers from managing their own health efficiently.
- Our solution bridges these critical gaps by connecting patients with healthcare providers through a unified, multilingual digital ecosystem that puts complete health management and emergency care directly into every user's hands.

Objectives

1. Medical history, reports, medications and allergies into one secure interface.
2. AI-assisted summaries and safety alerts, while keeping the doctor in charge.
3. Support faster clinical decisions — Provide doctors with a clear, patient-specific snapshot of important medical information.
4. Schedule appoitments, home lab tests and reminders.
5. Family dashboard.
6. Available in multiple languages.

Features

- Appointment Booking, Scheduling and Reminders
- Patient Details
- Prescription
- Database of Documents
- Breaking the Language Barrier
- In-App Payments and Billing

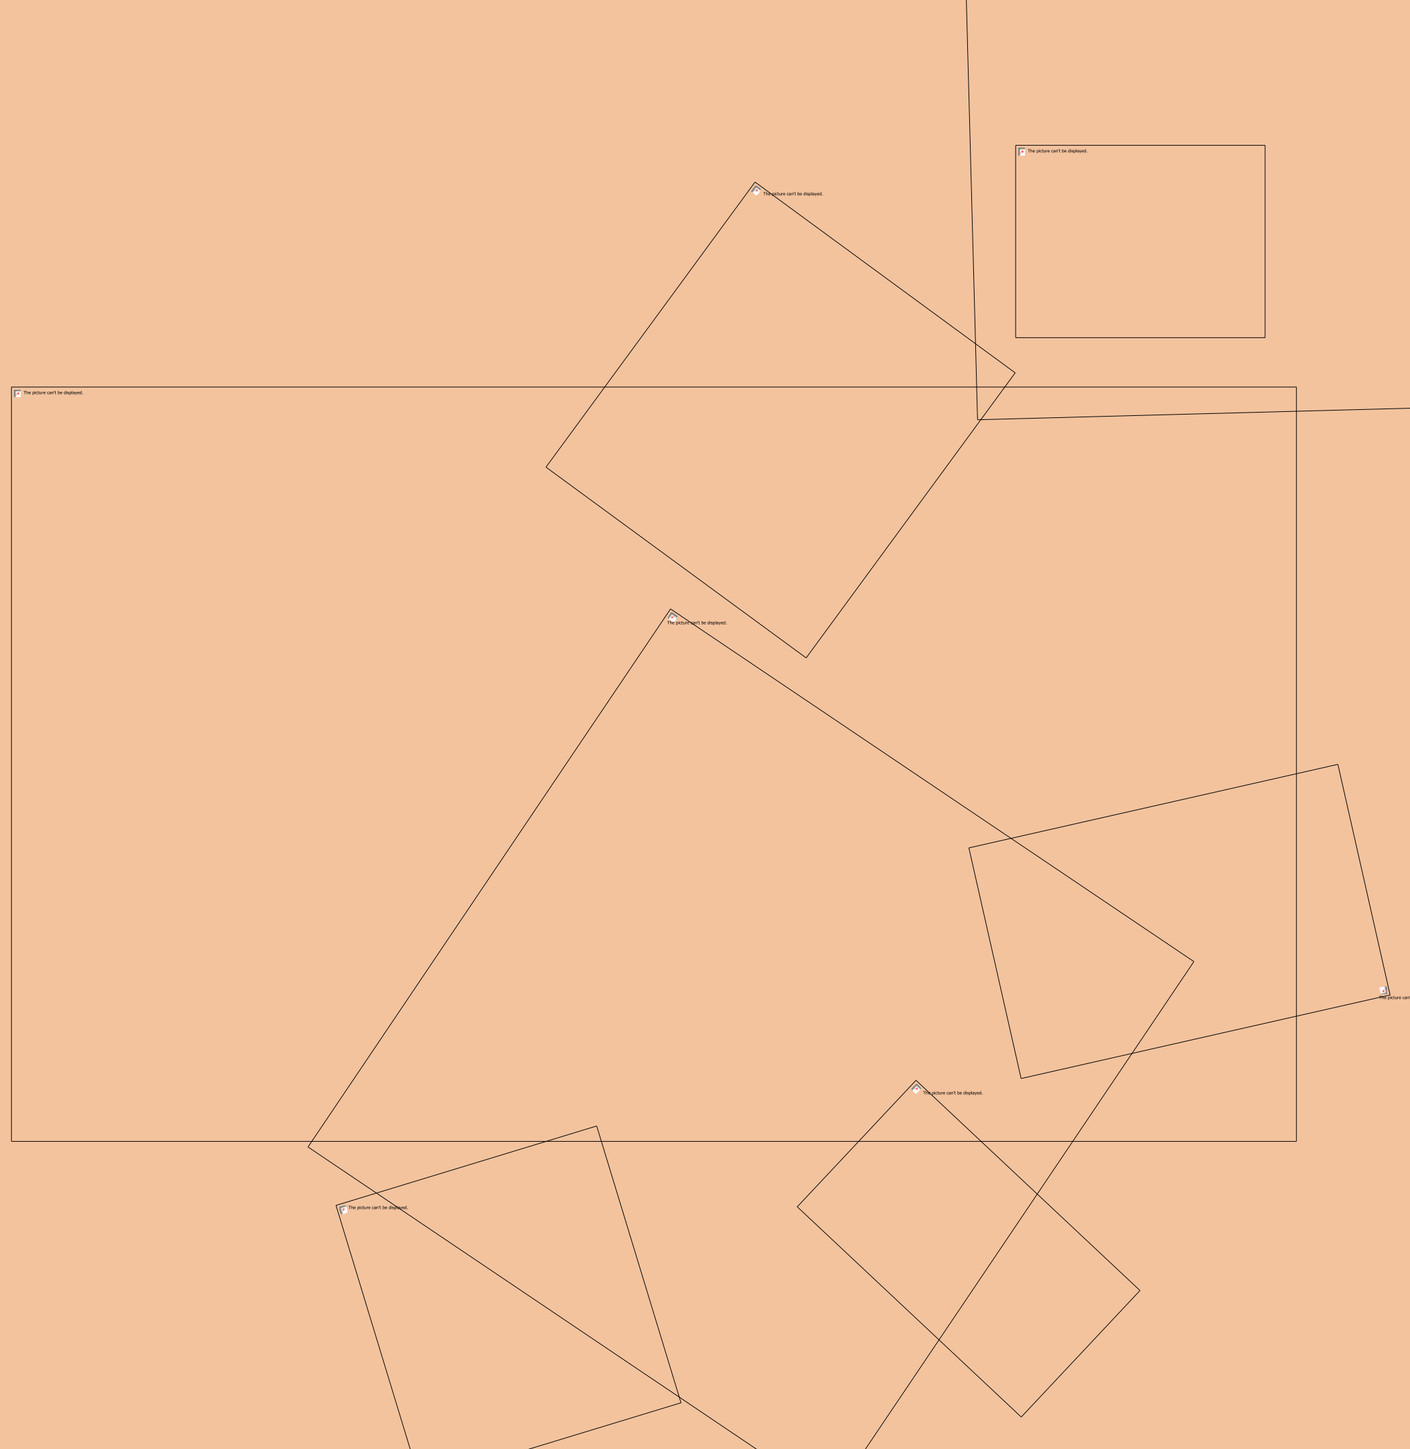

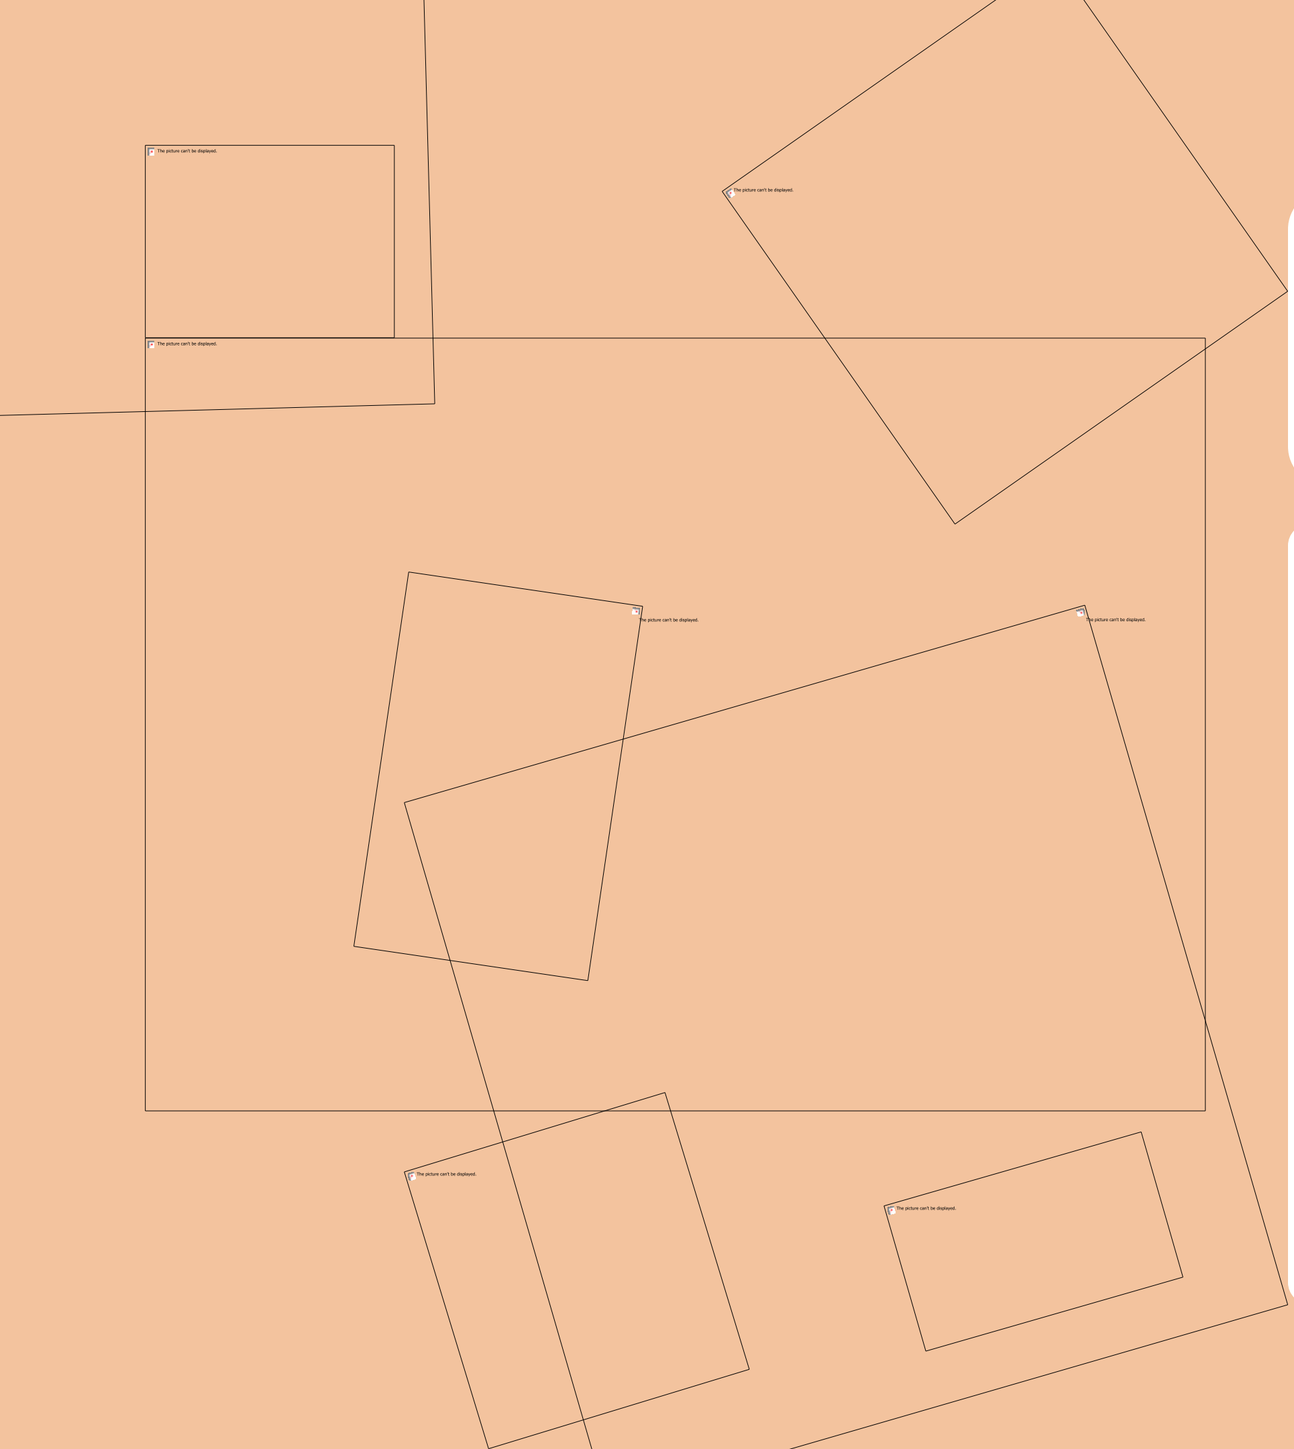

Appointment Booking, Scheduling and Reminders

- Search doctors by specialty and location.
- In-app scheduling, rescheduling, and cancellation of appointments
- Integration with existing phone calendars (Google, Apple Calendar)
- Book home lab tests
- Configurable daily alerts for taking medications on time.

Patient Details

- Every time a patient visits the hospital, a general check-up is done.
- The general check-up details are updated to the patient details each time.
- This includes details like blood group, BP levels, sugar levels, allergies, existing health conditions and other relevant health related data.

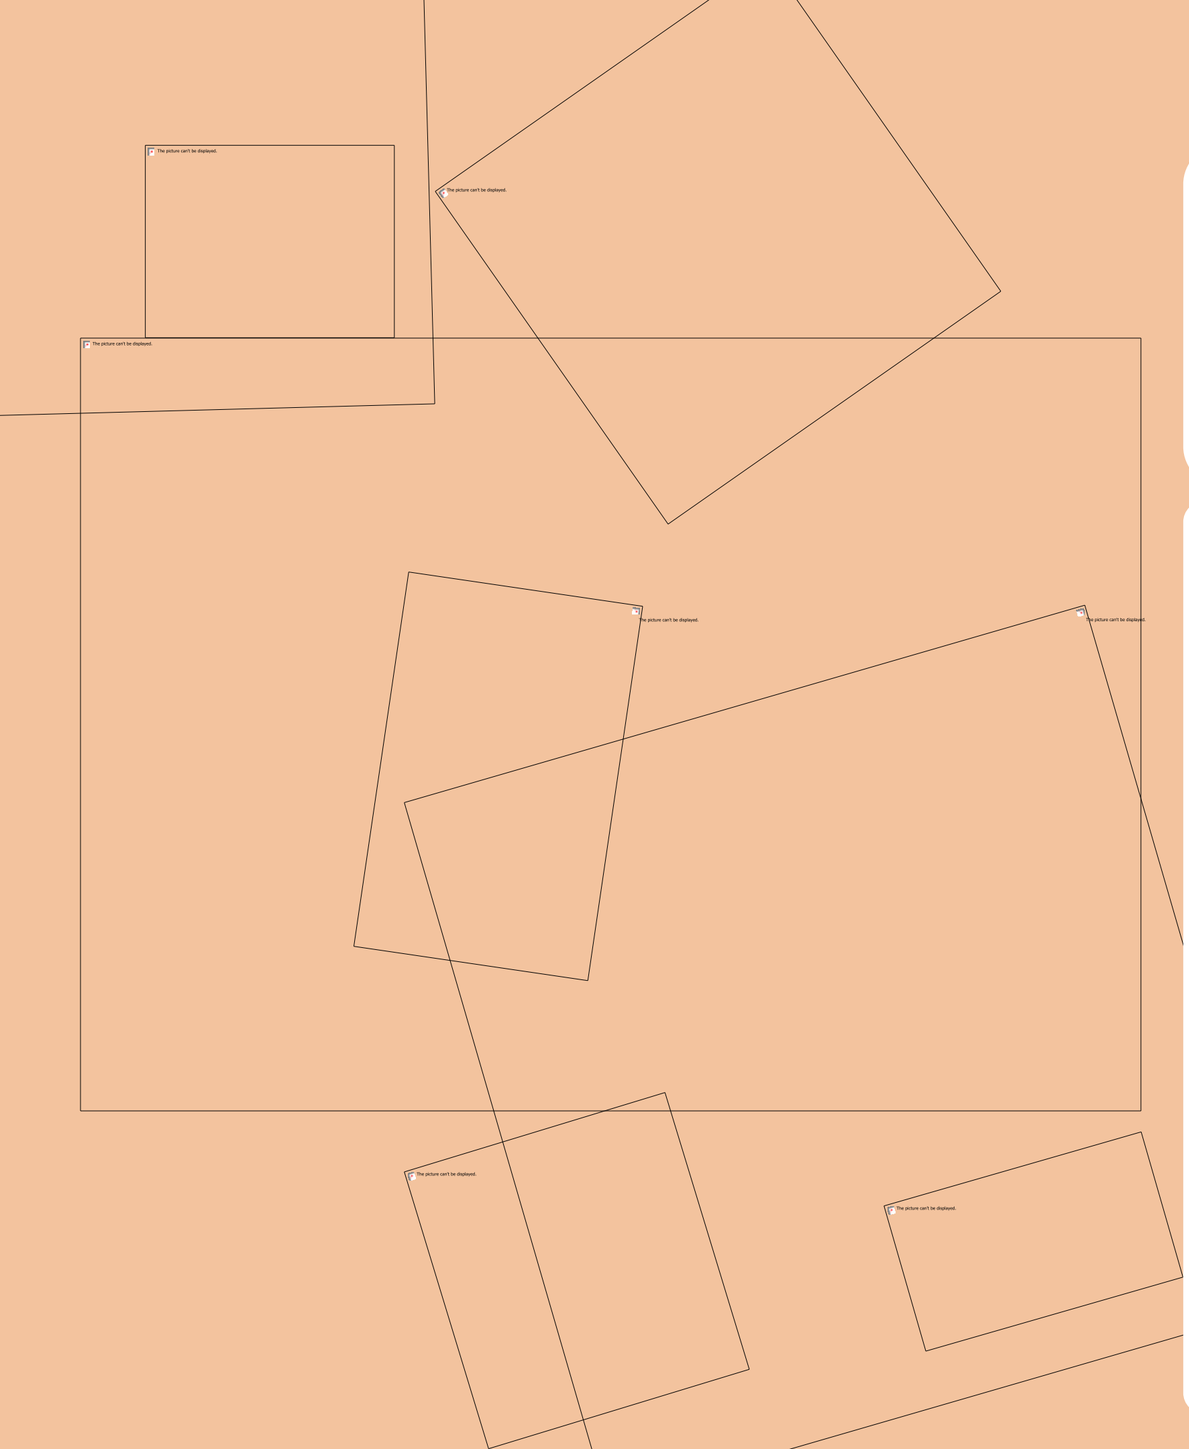

Prescription

- During the appointment, the symptoms are recorded in the E-prescription sheet for future references.
- Prescribed medicines are saved along with number of times of in-take and timings as to when in the day to take the medicines.
- The meds info contains links to concise details about the medicine so as to let the patient know what its purpose is.

Database of documents

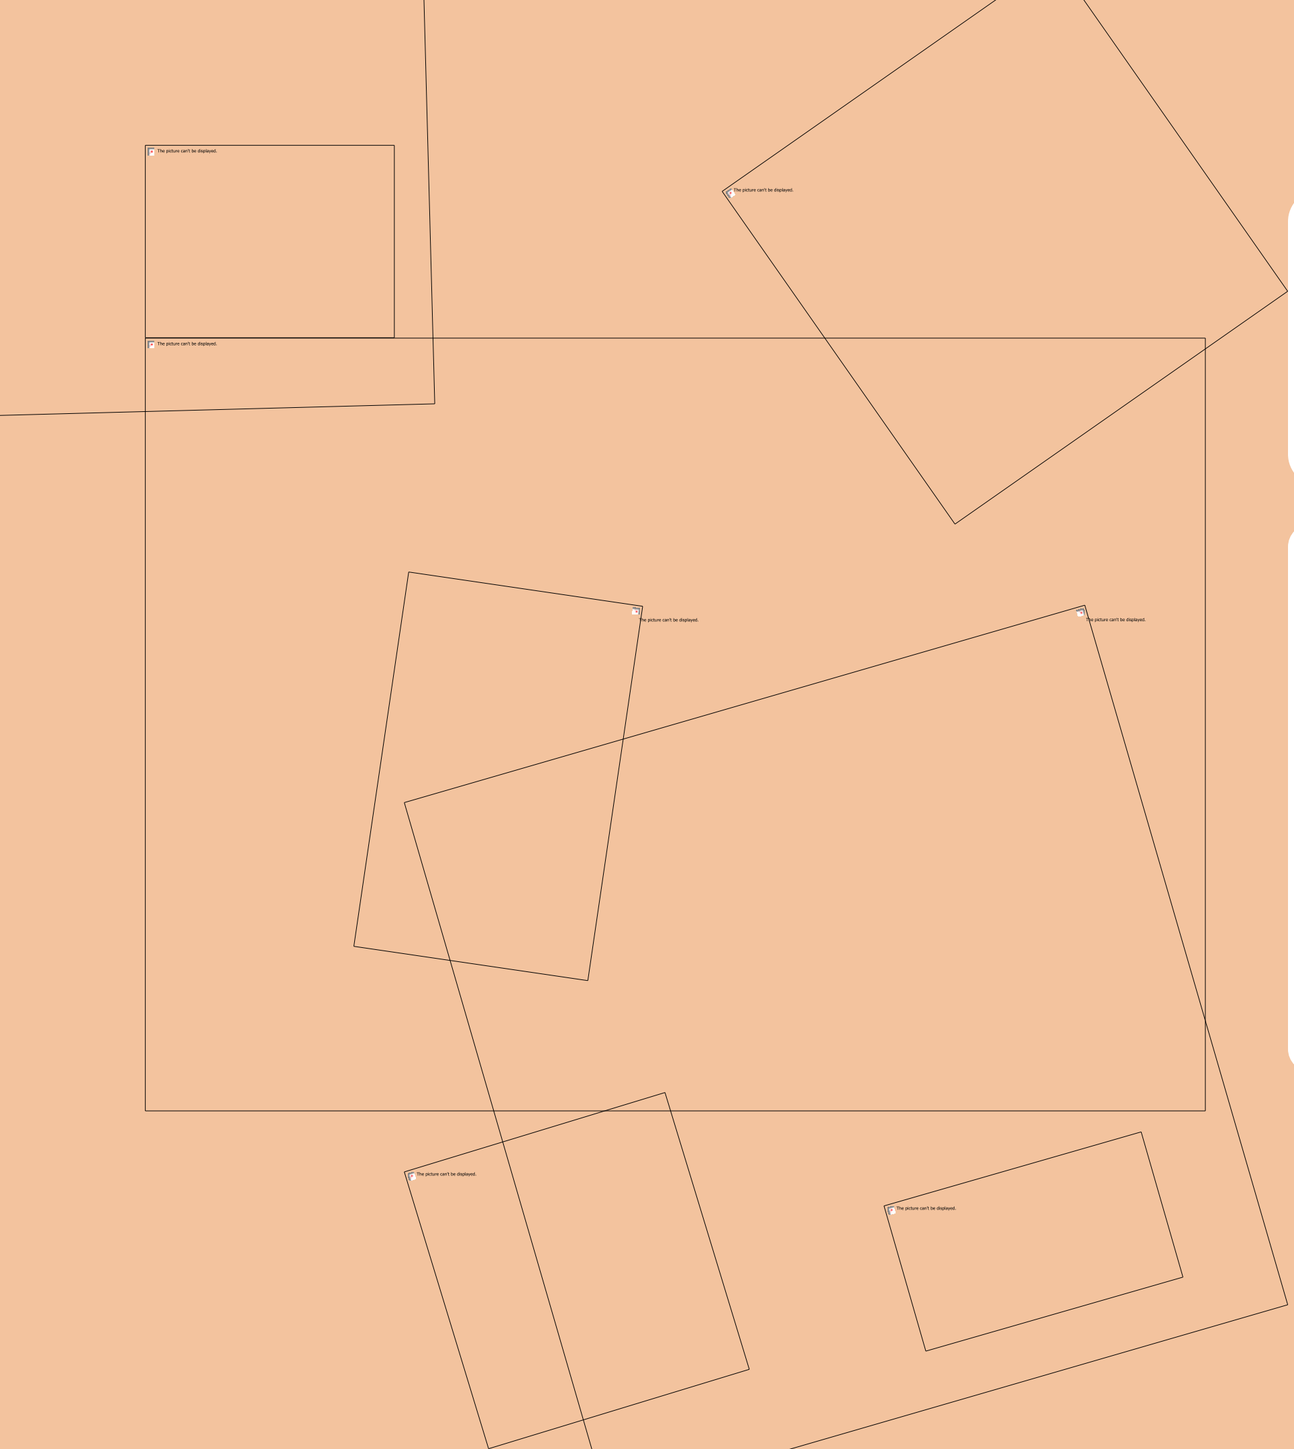

- All past patient details documents along with previous E-prescription sheets are stored in one place in the patient interface.
- This keeps data safe and accessible.
- It also makes it easier for the patient to access previous meds data.
- Losing of past prescription sheets is a common trouble for a lot of people. This helps overcome that issue.
- Lab reports and medical history such as blood tests, scans, X-rays, and other diagnostic reports are also saved to the patient's profile.

Breaking the Language Barrier

- 22 Official Languages | 121 Major Languages | Hundreds of Dialects
- < 12% of India’s population speaks or understands English
- 90%+ of new internet users in India consume content in local languages

- Key Drivers:
  - Eliminates misinterpretation in sensitive healthcare decisions.
  - Unlocks access for non-urban, non-English-speaking populations.
  - Drives inclusion by removing technical and linguistic friction.

In-App Payments & Billing

- Payment gateway integration (Credit/Debit cards, digital wallets, UPI, Apple/Google Pay).
- Itemized invoices, digital receipts, and insurance co-pay tracking.

Existing Apps & Tech

1. Practo

Doctor Discovery & Booking: Directory for in-person and video consultations.
Practo Drive: Manual digital vault for prescriptions and lab reports.
Integrated Care: Direct access to online medicine orders and lab tests.

2. Tata 1mg

E-Pharmacy Leader: Medicine delivery with automated refill reminders.
Medicine Information: Database detailing drug substitutes, side effects, and uses.
Diagnostics & Consults: At-home lab sample collection and virtual doctor consultations.

3. Apollo 24|7

Hospital Network Sync: Direct integration with Apollo’s doctors, clinics, and hospitals.
Express Delivery: Rapid medicine fulfillment via local Apollo Pharmacy stores.
Health Vault & AI: Integrated health packages and basic symptom checking tools.

Why our app is better?

Existing Apps (Practo, Tata 1mg, Apollo)

1. English-First Interface

Excludes 88%+ of non-English speakers

---

1. Walled Data Ecosystems

Records are trapped in proprietary vendor silos and non-transferable

---

1. Manual Document Uploads

High user effort leading to near-zero vault usage

---

1. Transactional Focus

Used only for one-off medicine orders or doctor discovery

Our App - Medisync

1. Native Multi-Language Support

Accessible across all Indian states

---

1. Interoperable & Open

Portable health records easily shared across any clinic or hospital

---

1. Auto-Sync via ABDM/ABHA

Zero-effort, automated record collection

---

1. Lifelong Health Companion

Continuous care, active treatment, and record management

Thank You
